# Difficult Diagnosis: Tip of the iceberg

# Knowledge of risk groups

## ✓ Prevent infection

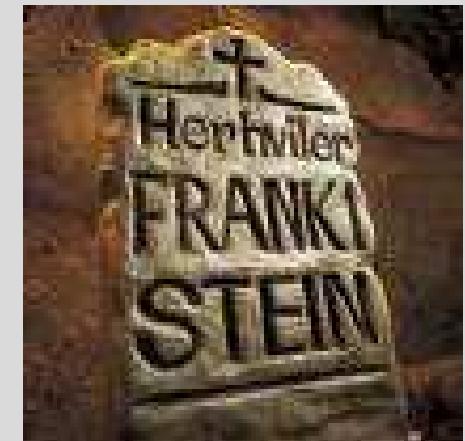

- Prophylaxis: identify patients who may benefit

## ✓ Improve outcome

- Earlier diagnosis
  - Microscopy & culture
  - CT scans
  - Galactomannan/β-Glucan/PCR

- Earlier treatment

- Pre-emptive therapy
  - Therapy

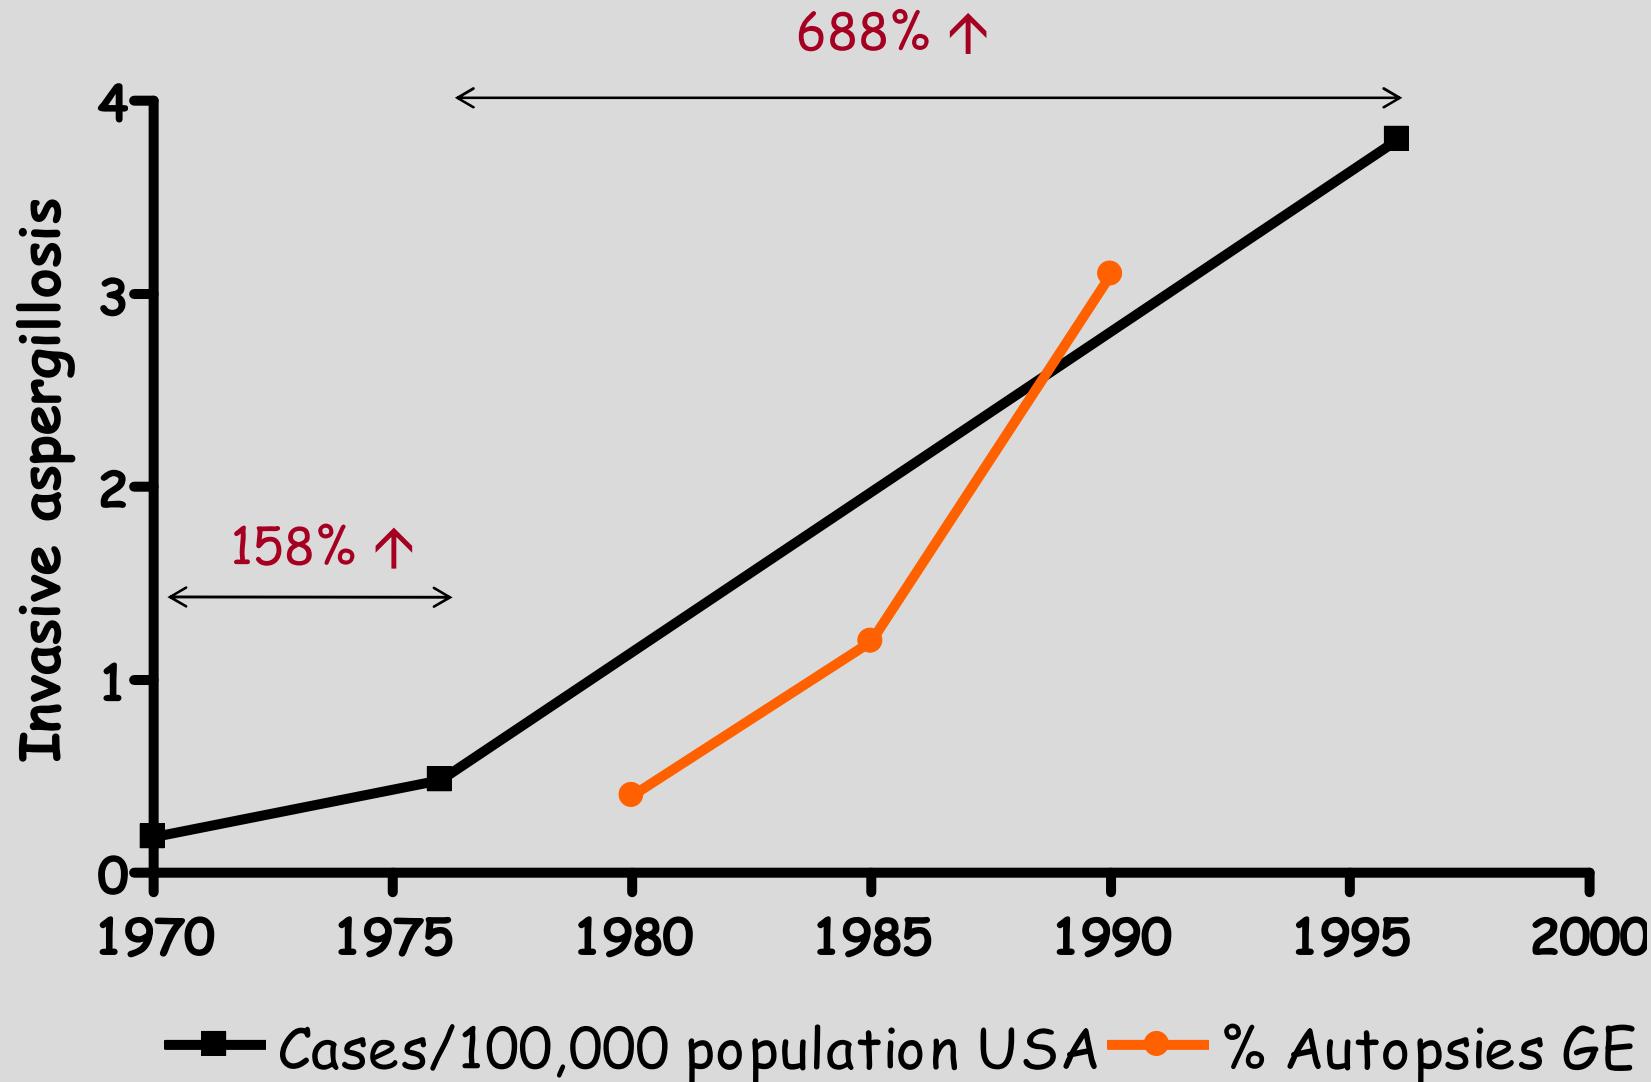

Overall 58%

# Agenda

- Long Term Epidemiology
- Recent Hospital and ICU surveys
- New Trends in recognised Risk Groups
  - Haematological population
  - SOT
- Host Genetics as Risk factors
- Heavy Exposure as only Risk factor
- Conclusion

# Epidemiology

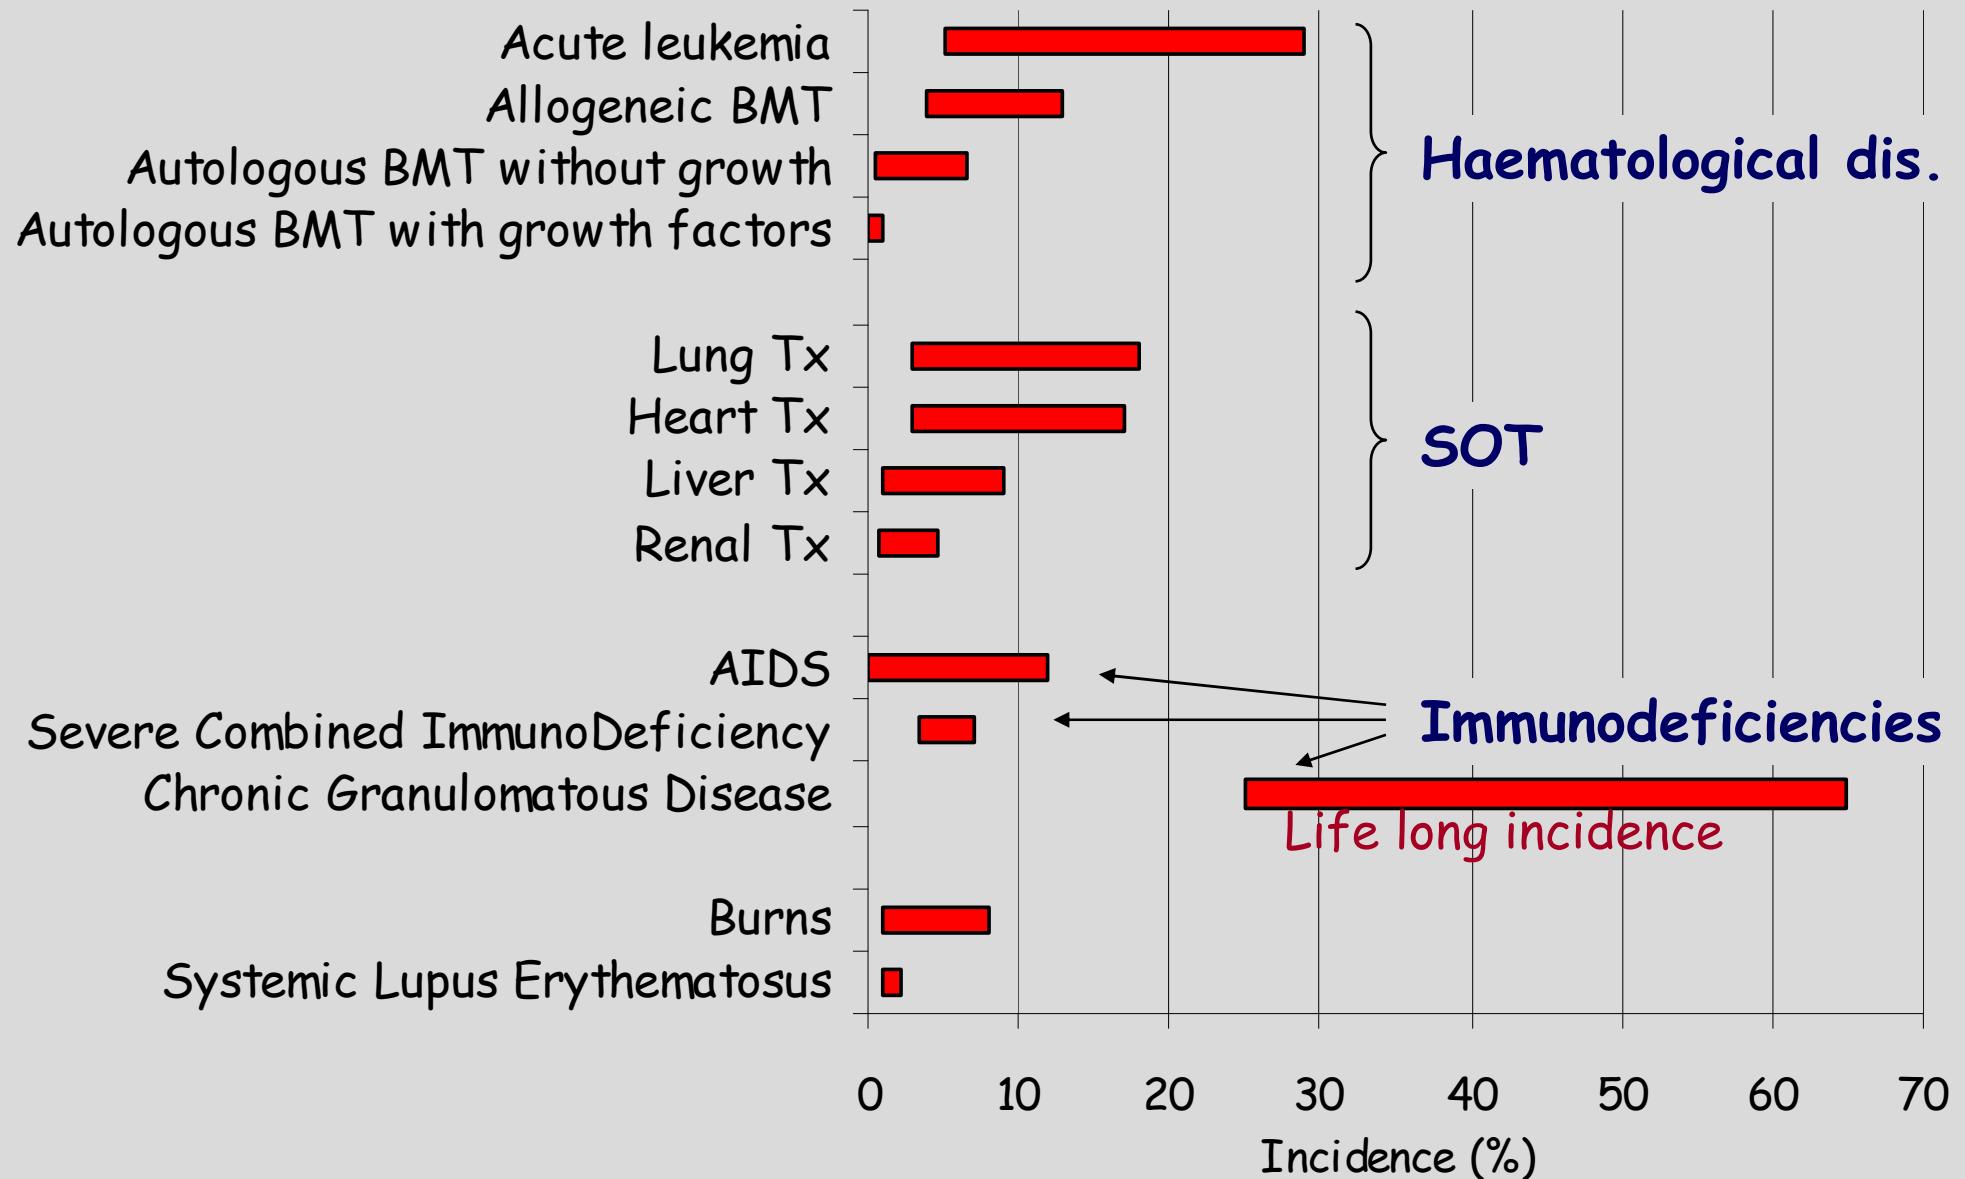

# Incidence rates 80'ties

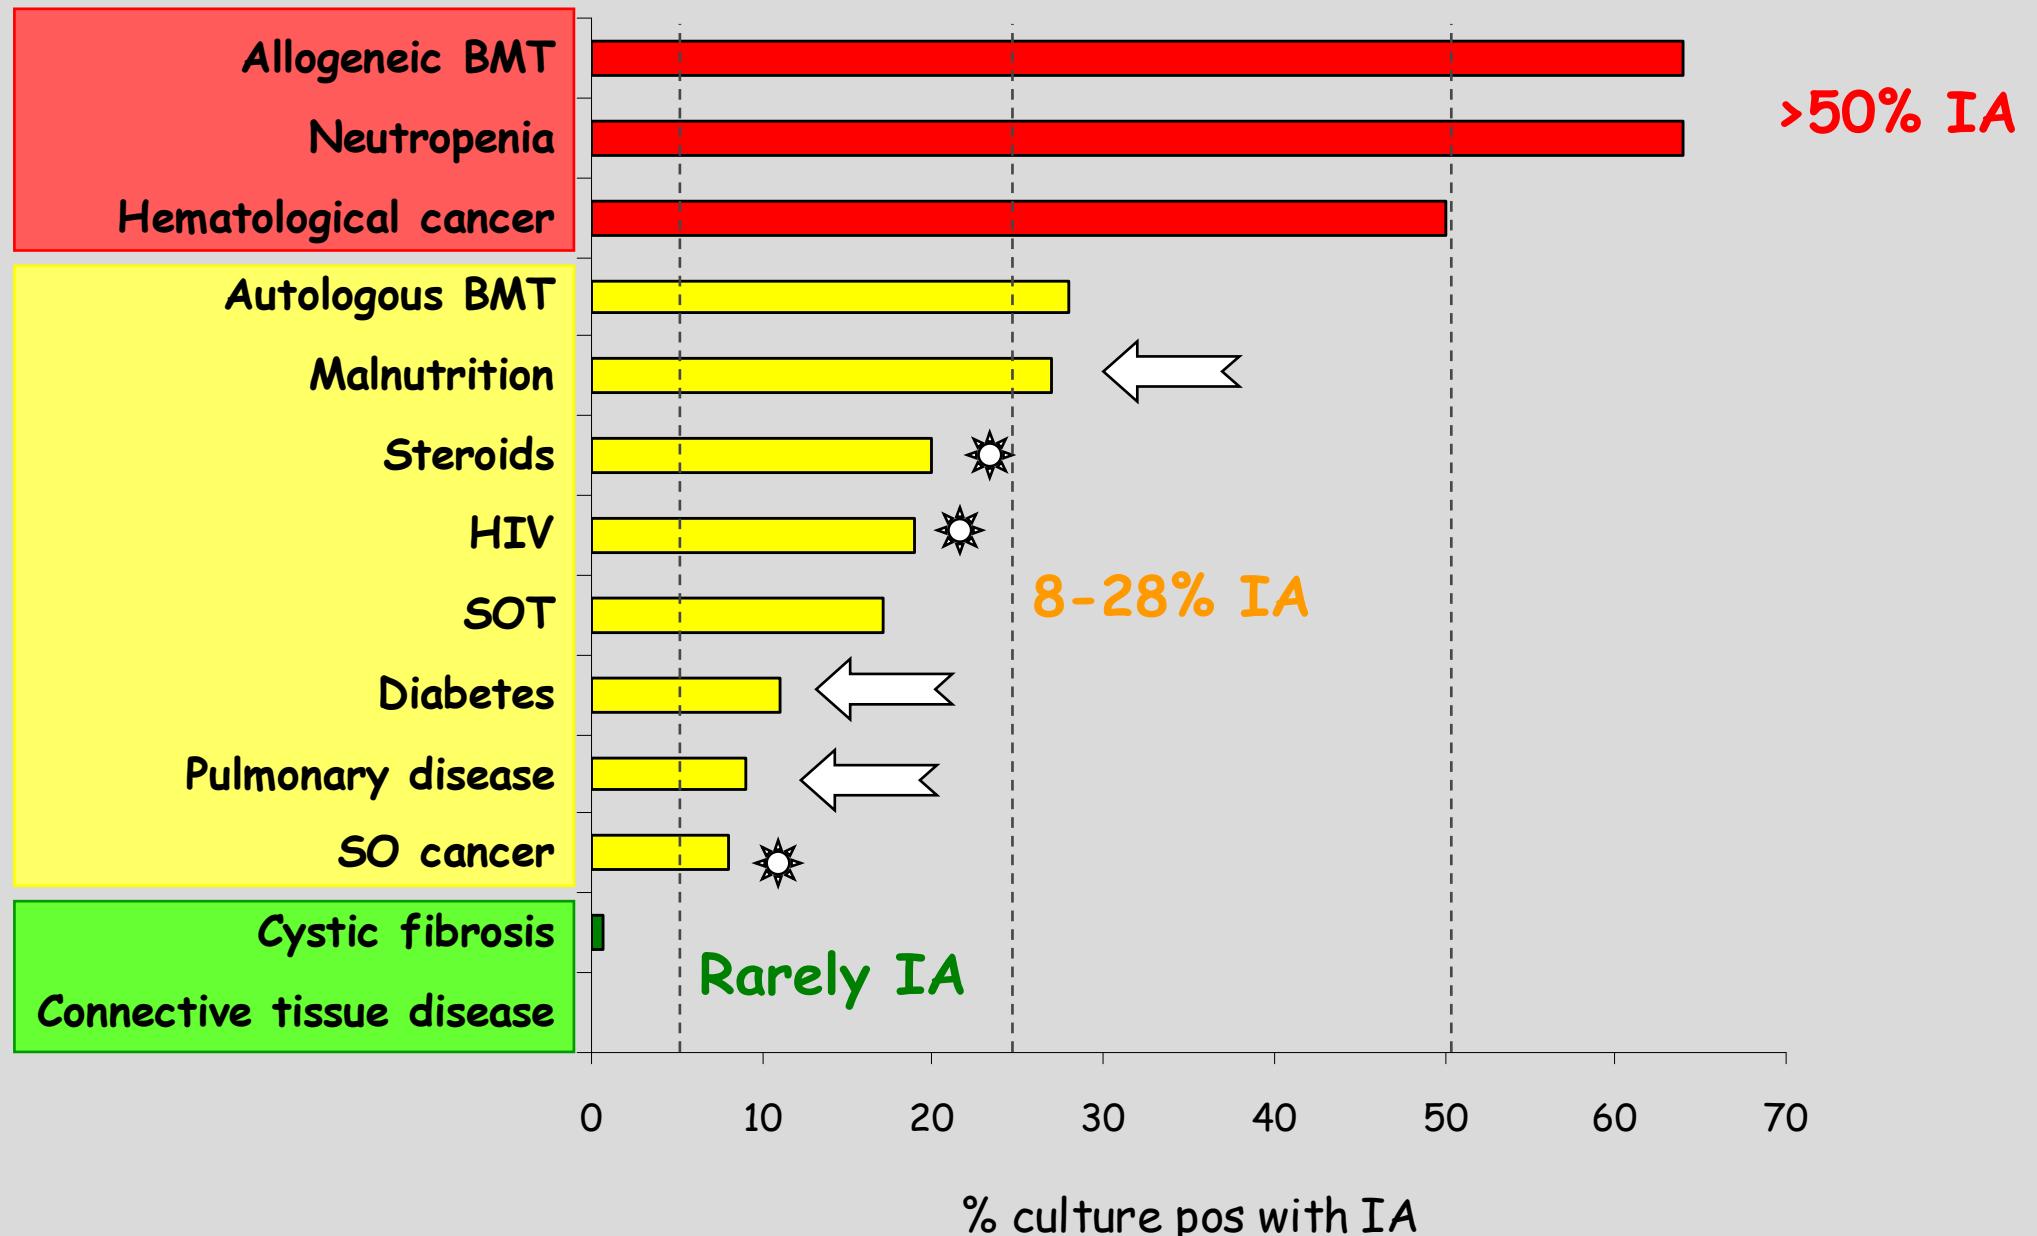

32 IA in 2315 autopsies (1.4%) in UK 1980-89

■ 16	Haematological BMT	11.4% 25%	~ 90%	
■ 13	SOT Liver Kidney	11.6% 16.9% 2.4%		
■ 3	Other cases Major surgery, pulmonary disease, steroids for RA			

# Incidence in the 90'ties

# Risk factors: PP positive culture

# Trend during 80 and 90'ties

- Haematological malignancies
    - SOT, AIDS, SCID, CGD
  - HIV
  - Steroids
  - Solid organ cancer
  - Malnutrition
  - Pulmonary disease
  - Diabetes
- } "Old" risk groups
- } Emerging risk groups during the 90'ties
- } "New" risk groups

# Recent Hospital and ICU surveys

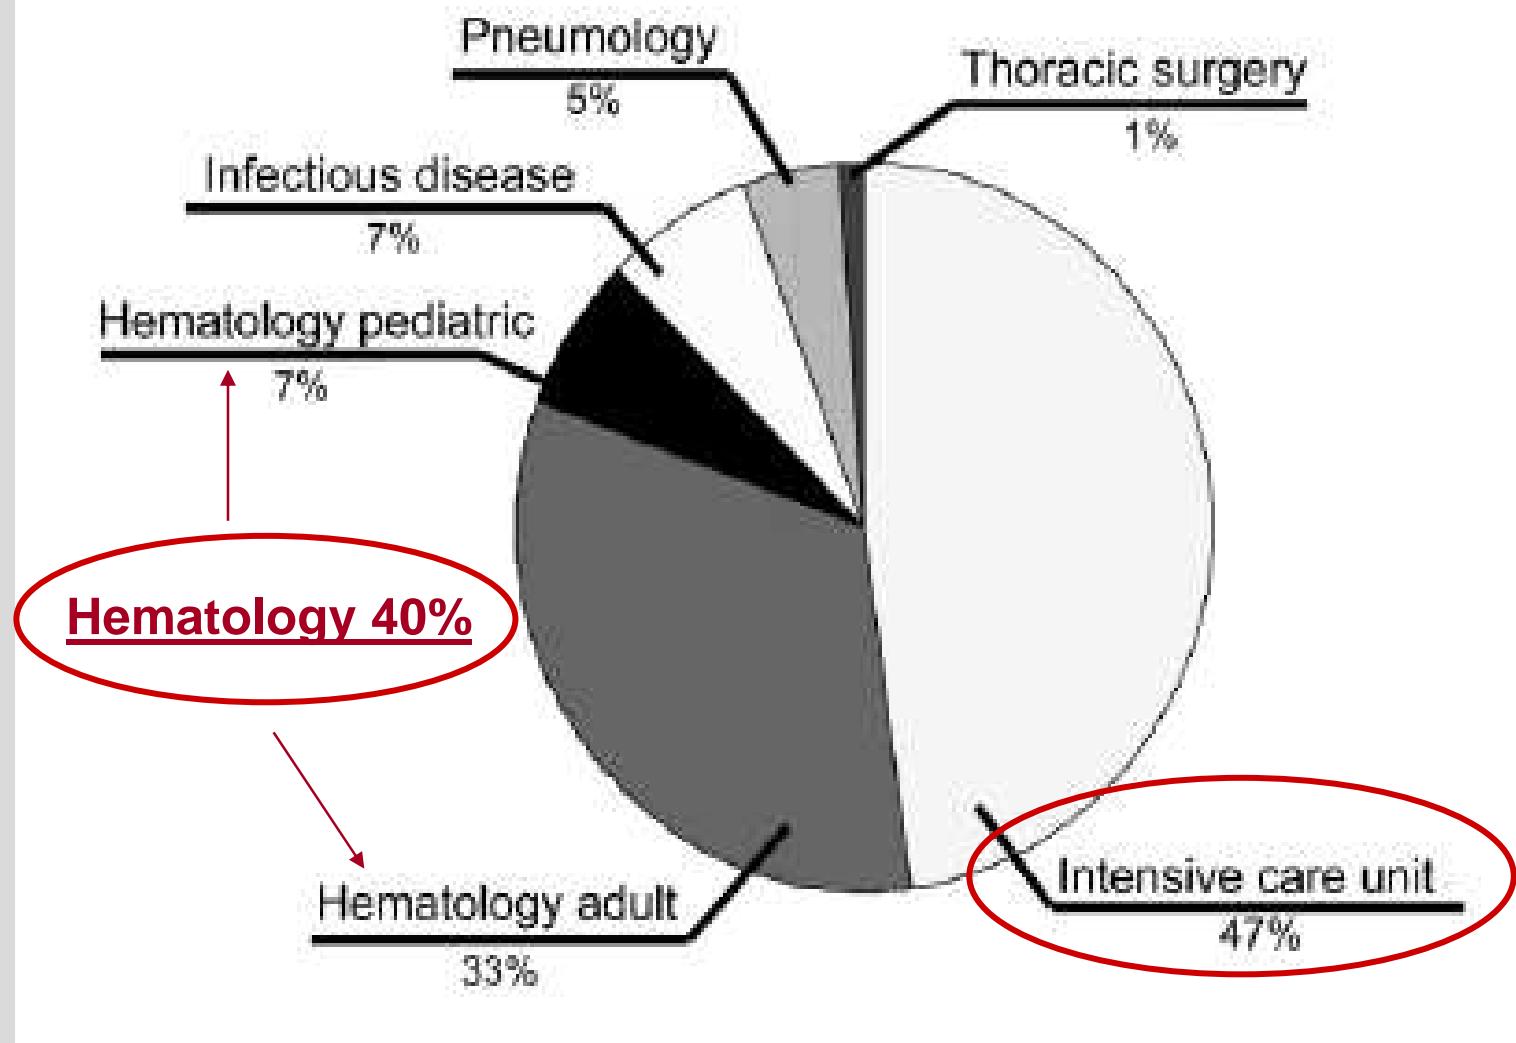

## ■ Publications recent 3 years →

– Renne, France	88 cases	1998-2004	Hospital
– Grenoble, France	74 cases	2000-2002	Hospital
– Leuven, Belgium	107 cases	2000-2003	MICU
– Gent, Belgium	83 cases	1997-2003	ICU
– 5 centres, Spain	20 cases	1998-1999	ICU

## ■ 372 cases (~300 from 2000-2004)

# Invasive Aspergillosis (France)

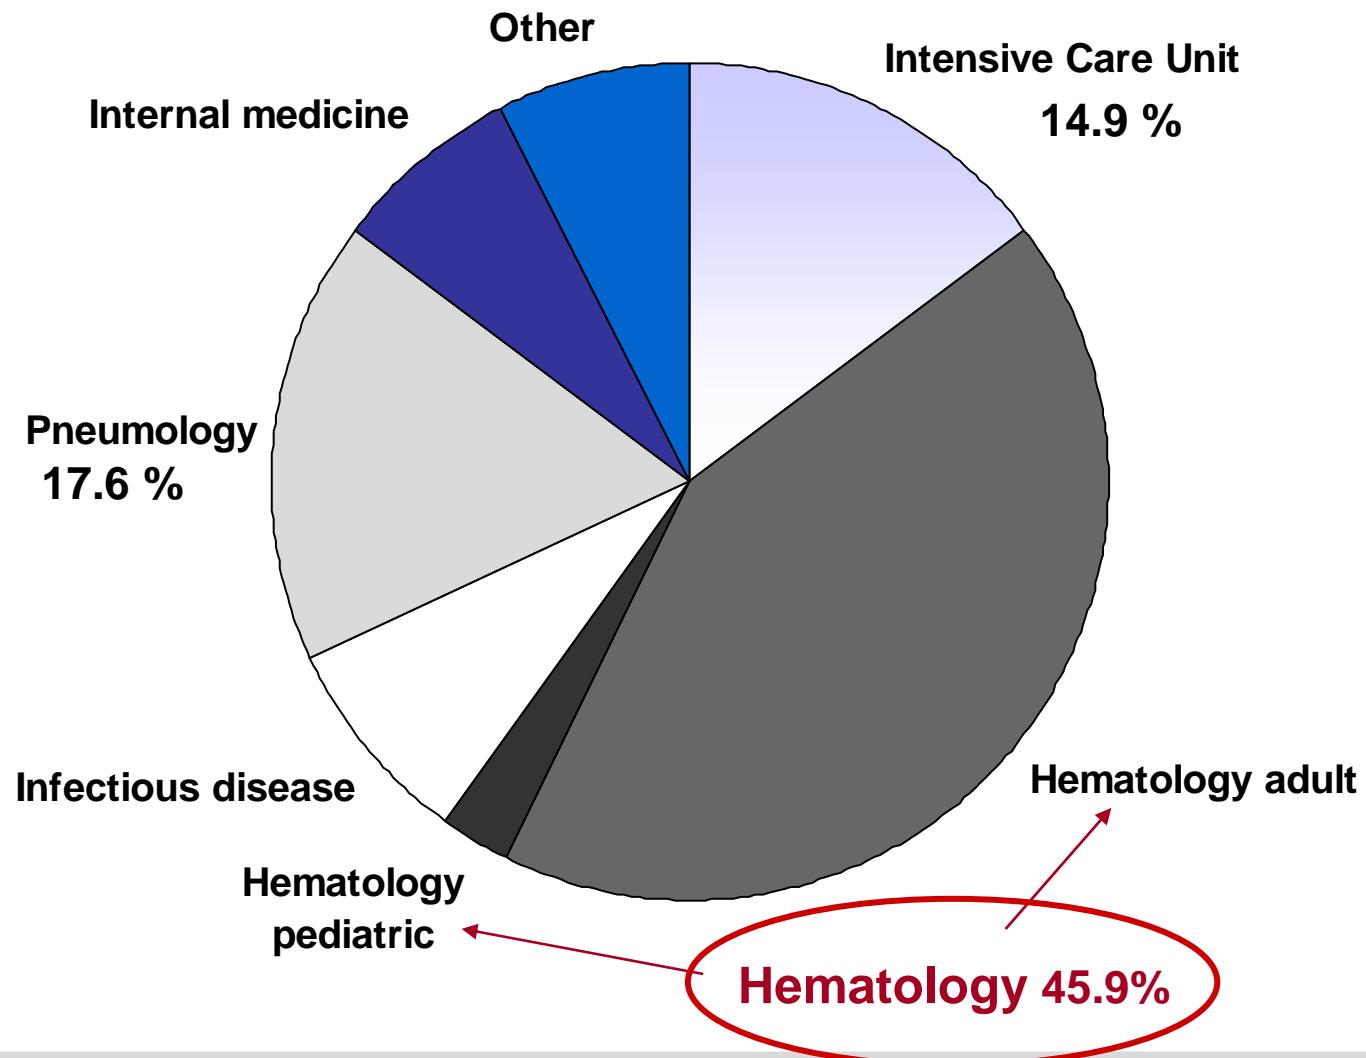

## Department at the time of diagnosis

88 Cases  
1998-2004  
Rennes  
Teaching  
Hospital

# Characteristics: non-neutropenic Pts

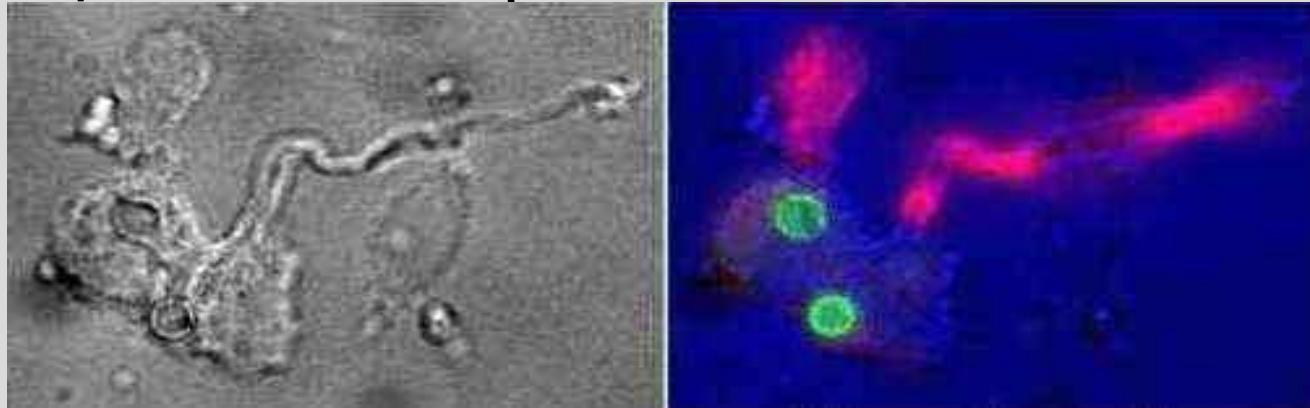

Variable	Neutropenic	Non-neutropenic
Recovery	16 (31%)	3 (8%)
Fever	50 (96%)	25 (69%)
Cough	35 (67%)	10 (28%)
Chest pain	17 (33%)	4 (11%)
Halo/air crescent	82%	5%
+ Bacterial infect.	8 (15%)	20 (56%)

# Outcome IA in COPD

Author	Publ. year	No. Pts	No. deaths
Cornillet	2006	17	15
Ader	2005	13	13
Meersseman	2004	33	28
Kisteman	2002	2	2
Rello	1998	24	24
Pittet	1996	2	2
Total		91	84 (92%)

# COPD and *Aspergillus*

- Impaired architecture of the lung tissue
- Steroids act *Aspergillus* enhancing in two ways
  1. ↓ Mφs and neutrophil function

<http://www.pasteur.fr/recherche/unites/aspergillus/research2.htm>

2. ↑ Growth rate *Aspergillus fumigatus* and *flavus*
  - 44% growth increase  $10^{-6}$  M Hydrocortisone

Ng. Microbiol. 1994

M. Cavling Arendrup

# "New risk groups"

## Recent Hospital and ICU surveys

Risk of IA  
■ ICU stay and *Aspergillus* + 47%-83%

Risk group profile	% of asp cases
■ ↑ COPD	31%-44%
■ ↑ Steroids as only RF	16%
■ ↓ HIV/AIDS	<2%

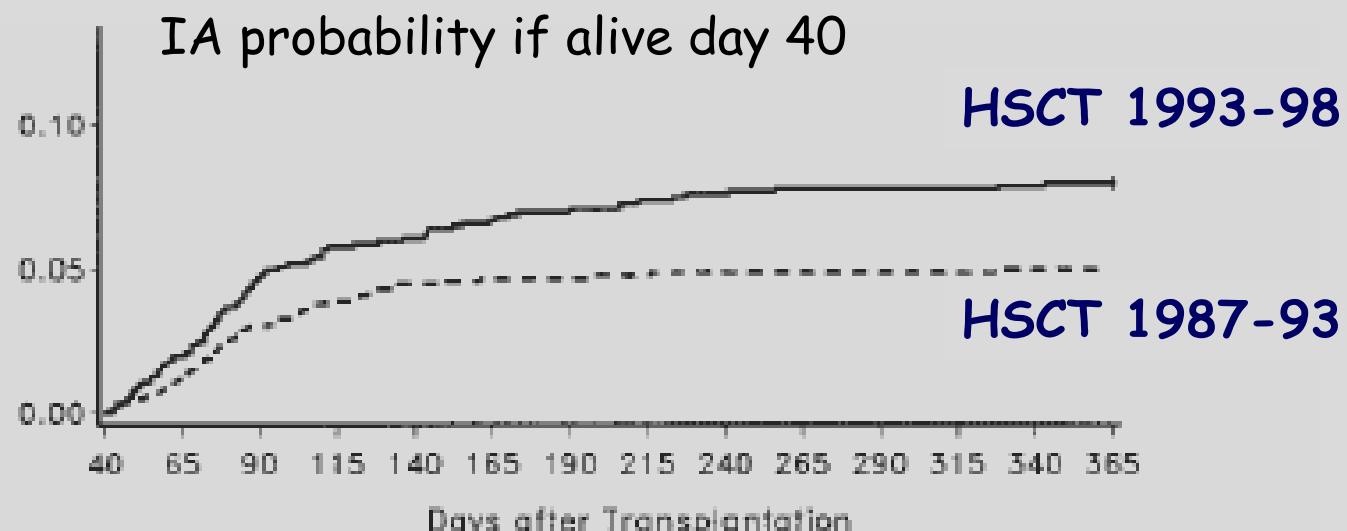

# Hematologic subpopulations

	Incidence		
	Cornet 18 hosp FR	Marr Seattle USA	Pagano 18 wards IT
AML	8.0%		7.0%
ALL	6.3%		3.8%
Allo-HSCT	12.8%	11.1%	
- Mismatched unrelated		10.5%	
- Matched related		7.3%	
Auto-HSCT	1.1%		
- Bone marrow stem cell	6.0%		
- Peripheral stem cell	1.6%		

# Timing of onset has changed!

**DESIGN.** 1682 Myeloablative HSCT. 187 Proven/probable IA

	Early $\leq 40$ d	Late 41-180 d	Very late $> 180$ d
1987-93	39%	56%	4%
1993-98	30%	53%	17%

# Risk factors IA in Myeloablative HSCT

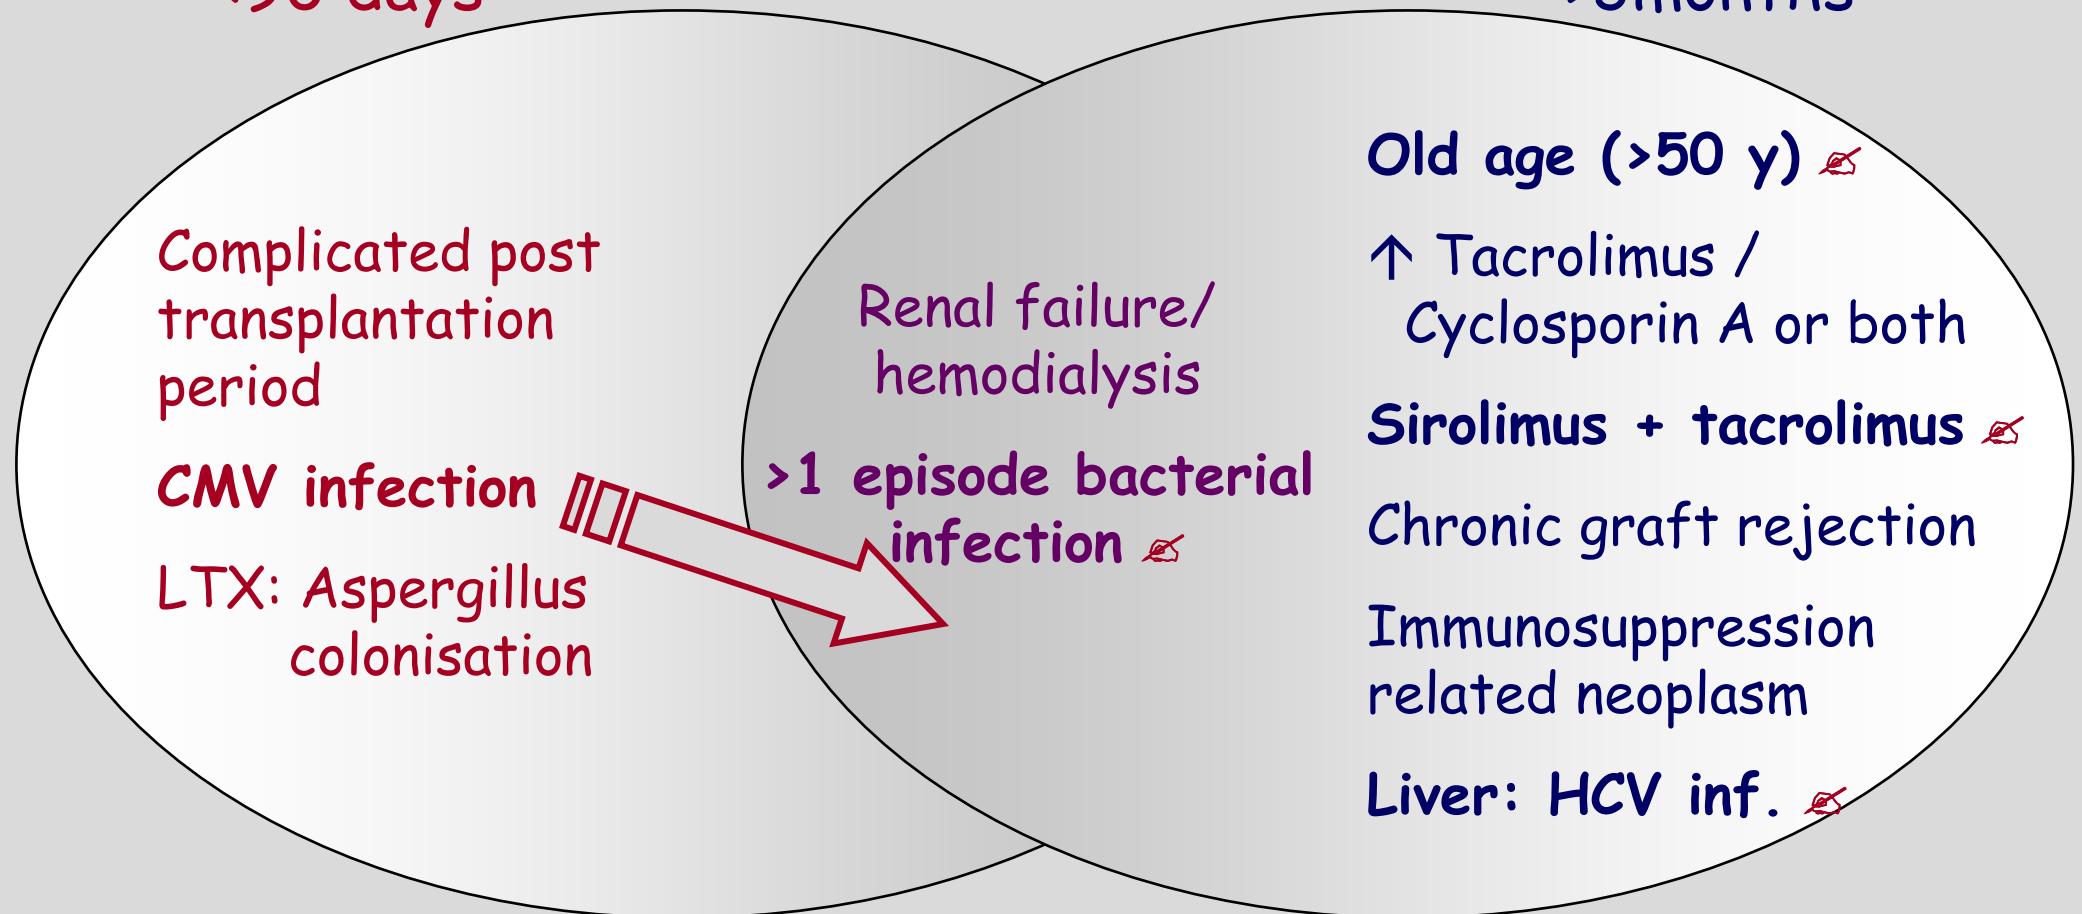

Early <u>&lt;40 d</u>	Late 41-180 d	Very Late <u>&gt;180 d</u>
CMV disease	CMV disease Respiratory virus ☓	CMV disease
Old age	Old age	
	GvHD 2-4	GvHD
Cord blood ☓	T-cell depleted CD34 selected	MisMatched/ Unrelated PBSC ☓
Aplastic anemia Myelodysplastic Syndrome	Multiple Myeloma Prednisone $\geq 2$ mg/kg/d	
	Neu-/lymphopenia ☓	Neutropenia

# SOT: Change in time of onset

Incidence	0-30 days	31-90 days	3-6 months	6-12 months	>1 year
1990-1995 1.06	58%	19%	4%	8%	12%
1990-2001 2.0	34%	21%	19%	14%	13%
1998-2001 1.18	25%	25%	10%	15%	25%
1994-2000 5.6	38%		62%		
2003-2005? NI	20%	30%	8%	15%	28%

# Risk Factors SOT

Early Invasive Aspergillosis <90 days      ×      Late Invasive Aspergillosis >3months

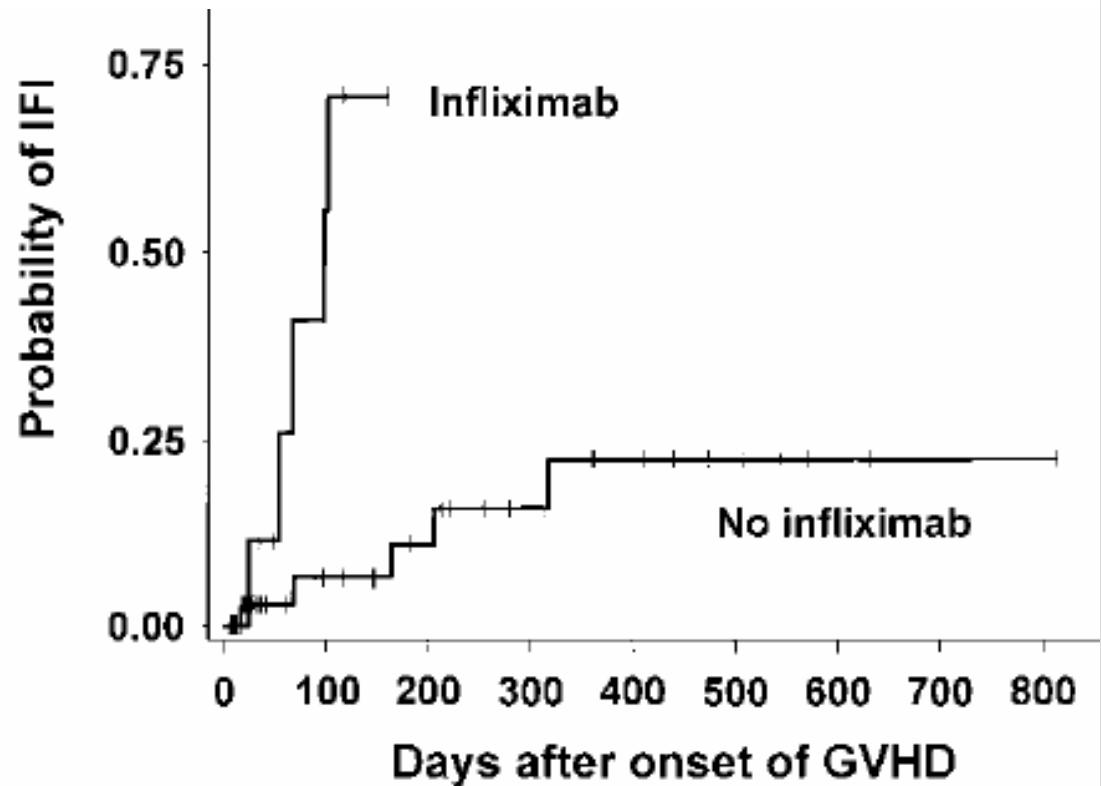

# High risk medication: Infliximab

HR Adjusted

## 13.6 Infliximab ~~(anti TNF- $\alpha$ )~~

264 allo-HCT, 16 IA, 53 GvHD, 11 infliximab

8.05 Non-myeloablative allogeneic HSCT (15% IMI)

3.46 Severe GvHD

# New Risk Groups transplantation

- Infliximab use in GvHD (RR>13)
- ↑Late onset ~ surviving patients are at risk!!
- CMV also for late and very late onset

## HSCT

- Cord blood
- Non-Myeloablative
- Respiratory virus
- Lymphopenia

## SOT

- HCV virus
- Aspergillus colonisation
- >1 bacterial infections
- Old age

# Genetics: I

# Heavy Exposure as sole risk factor

- 33-year old man
- Truck load bark chippings (BC) in December
- Fever a few days after working with the BC
- A week later he distributed the rest of the BC
  - Wet, slightly steaming and with mouldy spots
- Airway irritation → Fever, cough
  - Penicillin 7 days, followed by azithromycin
- Admitted to hospital Jan 6

# Heavy Exposure as sole risk factor

- Dry cough, fever 39°C, dyspnoea
- CRP: 780nM
- BAL: lymphocytes
- Culture/PCR/Ag neg
- Pos Asp Ab titre 18

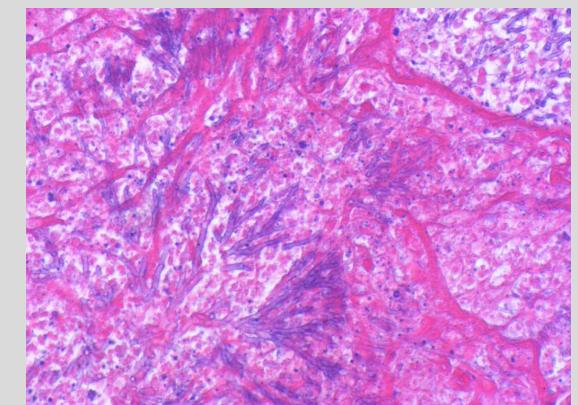

- Tentative diagnosis
  - Atypical pneumonia and allergic alveolitis
- Treatment:
  - Clarithromycin and prednisolone 50-75 mg/day

# Heavy Exposure as sole risk factor

- Re-admitted February 19
- Fever 40°, tachypnoea, cough
- CRP 3300 leukocyte count  $10 \times 10^9$
- BAL & biopsy: *A. fumigatus*
- Ambisome 150mg/day

- Died February 28th
- Autopsy: Disseminated Aspergillosis
- Serum Jan 5th: Asp Galactomannan 5.1

# In conclusion

## 1. Recent Hospital and ICU surveys

- ↑ ICU patients
- ↑ Steroids & COPD
- ↑ Malnutrition, Diabetes and systemic/respiratory diseases

## 2. New trends in recognised Risk Groups

- Haematologic: later onset, high risk treatments
- SOT: later onset, age, bacterial infections, viral infections, high risk treatments, colonisation

## 3. Host dependent Risk factors

- Genetic influence Asp susceptibility

## 4. Heavy exposure as only risk factor

# Thanks to

- David Denning, Manchester, UK  
For being a highly qualified  
"sparring partner" during the final  
preparation
- ICAAC organising committee  
for the invitation
- To You  
for your attention
