

Disease Mechanisms Underlying Chronic Mucocutaneous Candidiasis

October 25-27 2017

This year the Radboud Center for Infectious Diseases (RCI) in collaboration with EURO-CMC organizes the first frontiers international conference on disease mechanisms underlying fungal infections and chronic mucocutaneous candidiasis.

The conference covers recent insight in antifungal host defense and microbiology of fungal infections, and will highlight novel discoveries in the field of chronic mucocutaneous candidiasis. An international group of experts in the field will present their work and young scientists are given the opportunity to present their work. Best oral and poster presentation prizes will be given.

We would like to invite colleagues in the field to join us in this very exciting scientific meeting. The deadline for abstract submission is July 1st and for registration is August 30th 2017. There will be a limit of 200 participants for the conference.

Looking forward to welcome you in Nijmegen,

Frank van de Veerdonk, Mark Gresnigt, Anne Puel and Bodo Grimbacher

Speakers

CMC

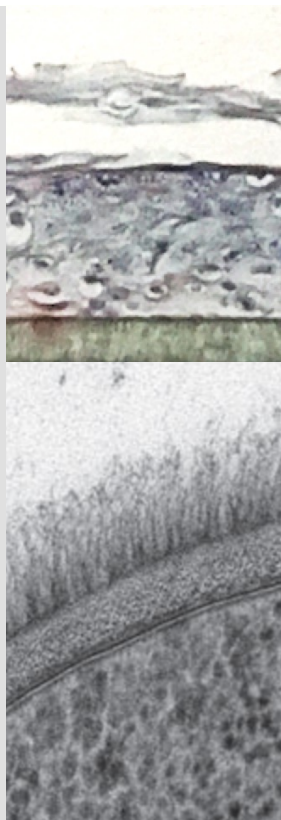

Charles Kirkpatrick
Desa Lilic
Michalis Lionakis
Kai Kisand
Alexandra Freeman
Raffaele Badolato
Mihai Netea
Bodo Grimbacher
Anne Puel

Fungal Microbiology

Bernhard Hube
Neil Gow

Antifungal host defence

Luigina Romani
George Chamilos
Agostinho Carvalho
